

Aluminum Railing Installation Manual

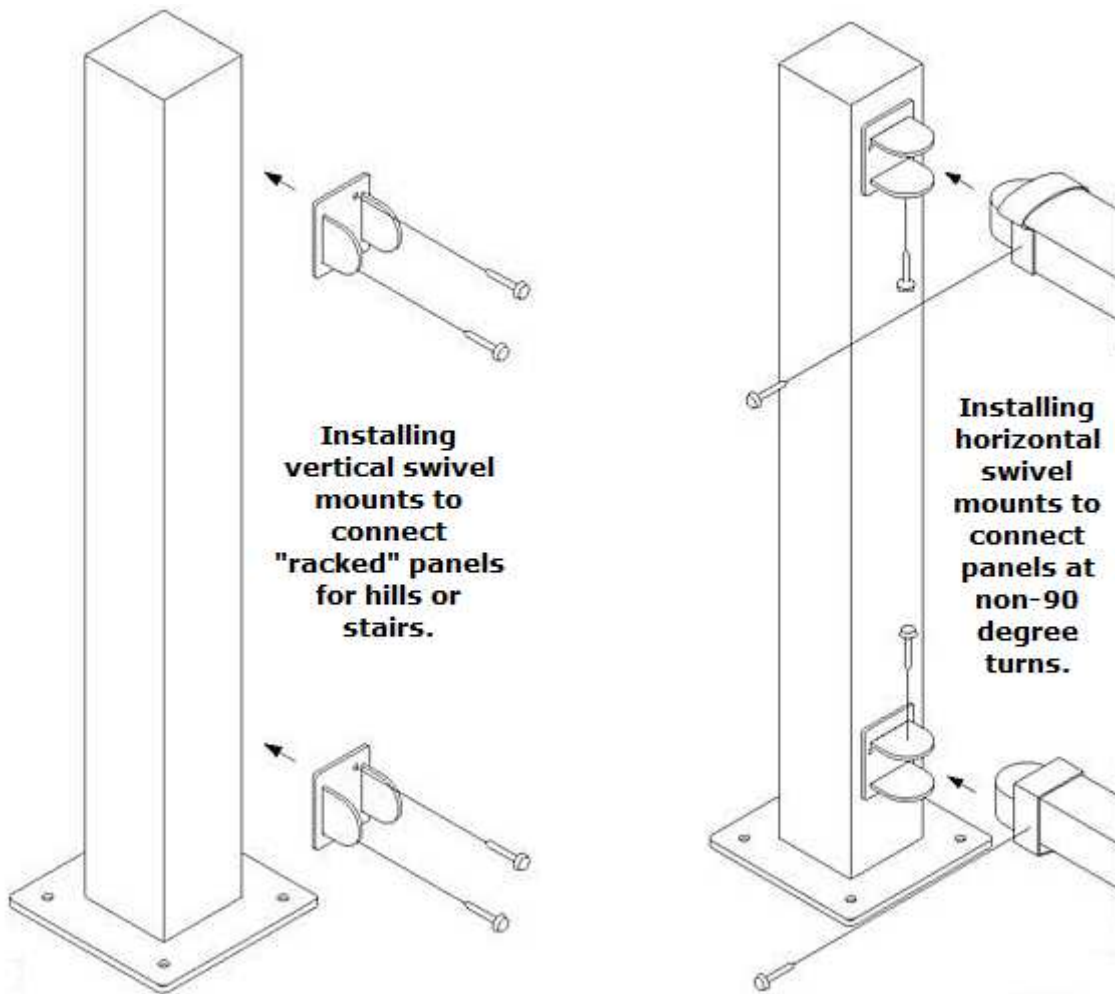

Our gorgeous aluminum railing is the perfect compliment to any residential/commercial deck, porch or balcony. This is an exquisite industrial grade product, rust free and backed by the same lifetime manufacturer's warranty.

This product is available in 36" high or 42" high, 8' wide and/or 10' wide preassembled panels. Choose from 3 standard colors: Black, White or Bronze. The panels can be installed straight or they can be "racked" for hills or stairs.

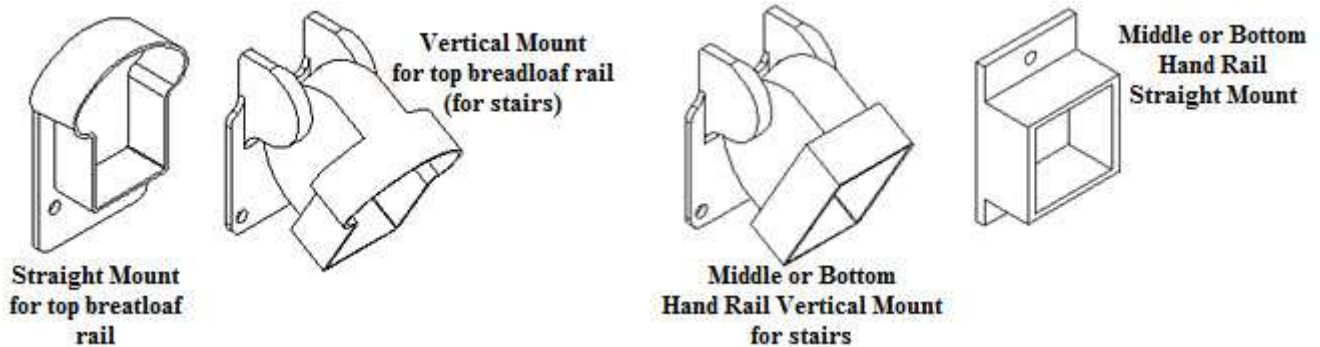

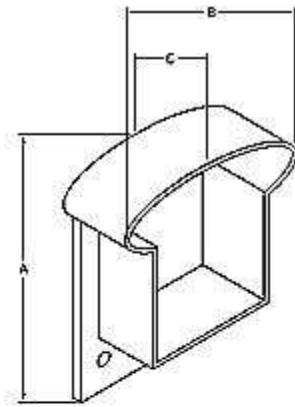

One of the fine distinctions of this product includes a flared, curved top horizontal rail on every panel.

Unlike our standard fencing products, because of the special, curved top horizontal rail, you will need mounts to connect each panel to each post. If you choose a 2 - horizontal rail configuration, you will only need top and bottom mounts. Similarly, if you choose a 3 - horizontal rail configuration, you will need top, middle and bottom mounts.

www.GreatFence.com

You will need 3" x 3" posts for your Aluminum Railing system and these can be selected in our Online Store. Each post purchase automatically includes a standard 3" x 3" post cap. Decorative ornamental post ball caps are available at an additional charge.

The only thing we do not provide are the anchor bolts for your Post-Deck Mounts or Post-Welded Plates. There are too many types of material that people install this product on (cement, wood, composite...etc) that, administratively, would be extremely difficult to manage many different types of anchor bolts or lag bolts you will use to secure your posts. This is a nominal cost and can be purchased at one of your local hardware stores.

Save thousands of dollars of labor costs and purchase your aluminum hand railing system today. Let us know if you have any questions regarding this product or its installation.
